New for old mower 'scrappage scheme'

Parts Depot UK are introducing a new for old mower 'scrappage scheme' which gives a guaranteed £1000 allowance against any new Ariens ProWalk rotary, flail or cylinder mower. Like the popular based car scrappage scheme, customers get an attractive cash bonus for replacing their old commercial mower, whatever its condition, as long as the machine is more than 3 years old and has a deck 26" or over.

Ariens ProWalk range features Pro Steer controls for low vibration, tough XL spindles for extra durability and a peace of mind two-year commercial warranty. The ProWalk range offers models suitable for general mowing, large areas requiring a quality finish and cutting safely on banks with a choice of rotary, flail, vertiflail

and cylinder deck widths from 30" to 48".

The scheme is open until 15 September 2010, but may end earlier dependent on stock availability. All mowers exchanged as part of the scheme will be disposed of in an environmentally friendly manner with all fluids removed and materials recycled where possible.

Anyone interested in the scheme can contact Parts Depot UK by calling the Scrappage Hotline on 01282 856828 or registering their interest online at: www.partsdepotuk.com indicating their preference of mower.

New show on the horizon

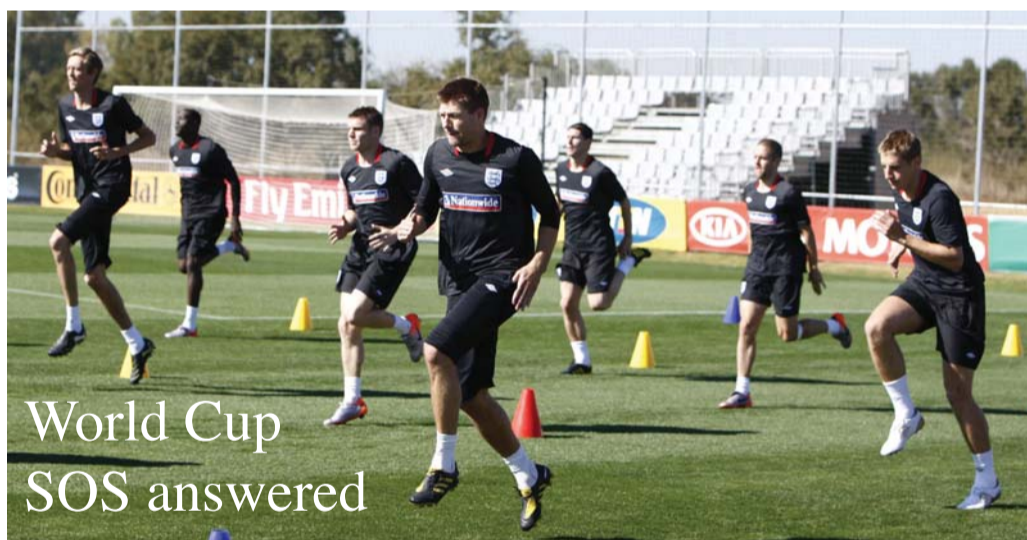

Planned for Wednesday 13th & Thursday 14th April 2011, National Hall, Olympia, London, Landscape is a brand new trade exhibition for all those involved in interior and exterior landscape gardening aiming to feature manufacturers and suppliers of everything from cut flowers and vases through to pots and flag stones, conservatories and water features.

The show organisers say that if you make anything from architectural iron work to bird baths, planters, or sheds then Landscape is the show for you. If you are involved in the production of specialist trees, sculptures, structural steel and sundials then you should exhibit at Landscape and if you supply soil, turf, plants and paving then you should also exhibit at Landscape.

The new event's visitor profile is planned to include florists, landscape designers, architects, facilities managers and all those that specify where plants and planting are used.

The show will feature contemporary, cutting edge technologies and methods, and be supported by show gardens, themed floral displays and a comprehensive seminar programme. Full details are available at: www.landscapeshow.co.uk

World Cup SOS answered

England's 2010 FIFA World Cup hopefuls are pictured training on hard-working pitches benefiting from Barenbrug's BAR 50 SOS seed. All 32 of the South African team base camps were overseeded with SOS earlier this spring,

including the Bafokeng Sports Campus near Rustenburg where the 23-man England squad trained.

The tournament's team of independent agronomists and advisors agreed that BAR 50 SOS was the solution for achieving

the fast establishment, sustained growth and recovery demanded under the intensity of wear on the training pitches.
